

A practical review step before an Alberta claim is submitted

Zorva is designed for Alberta primary-care billing teams that want a more consistent way to examine potential AHCIP claim problems before submission. The clinic's billing team keeps the final decision about what, if anything, is submitted.

A three-step human review path

1 Bring an encounter into review

Start with the narrative and billed services the team wants to assess.

2 Review the available context

Place relevant billing context and supporting references beside the encounter.

3 Make the decision as a team

Accept, correct, dismiss, or investigate; Zorva does not submit the claim.

Controlled pilot fit

- Alberta primary-care team using AHCIP
- Named billing-workflow owner
- Human reviewer retains the final decision
- Privacy and onboarding review before clinic data

Deliberately not promised

Pilot duration, volume, pricing, success criteria, privacy terms, support commitments, customer outcomes, certifications, and financial results remain unapproved and are omitted.

Start with your current workflow

Discuss where review effort is concentrated today, what information the team needs before submission, and whether a controlled evaluation is an appropriate fit. This is a request for a conversation, not self-serve production access.
